Career Objective

To pursue an entry-level Machine Learning/Artificial Intelligence role where I can apply my skills in Python, machine learning, natural language processing, and deep learning to develop practical AI solutions. I am eager to work on real-world problems, strengthen my expertise in model development and fine-tuning, and contribute to innovative machine learning projects while continuously learning and growing as an AI professional.

Education

Vignan's Foundation for Science, Technology and Research — Vadlamudi, Andhra Pradesh
Bachelor of Technology in Computer Science and Engineering (CGPA: 7.90) — *Expected May 2027*

Sri Chaitanya Junior College — Bapatla, Andhra Pradesh
Intermediate (CGPA: 8.8) — *2020 – 2022*

Sri Chaitanya High School — Ponnuru, Andhra Pradesh
Percentage: 9.8 — *2019 – 2020*

Projects

Language Model Development and Fine-Tuning | *Python, PyTorch, Transformers, NLP* — 2026

- Developed a small language model from scratch using the TinyStories dataset to understand transformer-based language modeling and autoregressive text generation.
- Implemented the end-to-end training pipeline including text preprocessing, tokenization, batching, model training, loss computation, and optimization.
- Trained and evaluated the language model on the TinyStories dataset for next-token prediction and text generation.
- Fine-tuned a pretrained language model on a text-generation task using Hugging Face Transformers.
- Experimented with training configurations and hyperparameters to analyze their impact on model convergence and text-generation quality.

CropNex (AgriTech Platform) | *React.js, Node.js, MongoDB, Express.js* — April 2025

- Developed a full-stack agricultural platform connecting farmers and agricultural laborers for efficient hiring and workforce management.
- Built a location-based crop price prediction system to help farmers make informed decisions about crop selling.
- Implemented secure user authentication, farmer and laborer profiles, job posting, and crop listing functionalities using MongoDB and Node.js.
- Designed responsive React-based dashboards and integrated REST APIs for seamless frontend-backend communication.
- Centralized agricultural data to improve accessibility to farming services and information.

Student Profile and Achievement Management System | *NestJS, MySQL, AWS S3* — March 2026

- Developed a backend system to manage student profiles and academic achievements using NestJS and MySQL.
- Implemented secure RESTful APIs for CRUD operations, user authentication, and data management.
- Integrated AWS S3 for efficient storage and retrieval of student documents and achievement certificates.
- Designed a scalable database schema to maintain data integrity and support efficient query performance.

Technical Skills

Programming Languages: Python, SQL
Machine Learning: Machine Learning, Deep Learning, Natural Language Processing, Model Training, Model Fine-Tuning
ML/AI Frameworks: PyTorch, Scikit-learn, Hugging Face Transformers
Data Science: NumPy, Pandas, Data Preprocessing, Model Evaluation
Databases: MySQL, MongoDB
Web Technologies: HTML, CSS, React.js, Node.js, Express.js, REST APIs
Development Tools: GitHub, Visual Studio Code, Jupyter Notebook, Google Colab
Core Concepts: Object-Oriented Programming, Data Structures, Problem Solving
